Capsa Healthcare has evolved its breakthrough FirstDose platform to provide the next-generation medication management system designed for the unique needs of long-term care. NexsysADC provides the sophisticated medication and supplies control of alternative systems at a fraction of the required investment. This gives your pharmacy faster ROI without compromising safety, security, or operational flexibility.

**NexsysADC** is where automated dispensing meets inventive, common-sense design that provides configurable security and storage for a host of healthcare environments.

NexsysADC meets the highest standards for cyber security and HIPAA compliance (ISO 27001:2013 Certified)

Intuitive pick-to-light functionality assures simplicity and accuracy during medication administration, especially narcotics.

Full-size touchscreen interface and flexible software design support configurable workflows and dispensing protocols.
The NexsysADC Controlled Access Module (CAM)

Configurable CAM technology provides illuminated prompts to correct drawer and med compartment, each protected with a clear locking lid to simplify item identity and show available inventory.

Transferable CAM inserts streamline inventory counts, restocking, and medication distribution workflow to and from the pharmacy.

Scalable cabinet design permits unique set-up of NexsysADC with a mix of CAM drawers, open cell bin drawers, and bulk supply drawer sizes.

Adaptable and Scalable Configurations

NexsysADC provides a fully configurable platform to permit unique security and storage capacity for a wide array of healthcare applications and environments. Consult with Capsa Healthcare on your precise needs. We’re confident we can design the configuration you require.

Additional Features Include

Pulse™ Pharmacy Information System software interface

Advanced security including prox card and biometric authentication

Accommodates virtually all med and supply packaging types

Several options for replenishing meds, all controlled by the pharmacy
